

Kode Project

Our main contribution is to provide materials and know-how, for mixed curricula, tailored to the ICT industry requirements in which we operate.

Program offers theoretical and practical lessons covering Network Administrator tailored made curricula. Hands-on experience with real customers in live environment and laboratory activities.

Peer Learning, Communication and Team-Work are other important job required skills that candidates will develop throughout this program.

Successful candidate will be prepared to fully join the high demand of labor market and guarantee a career path for themselves.

KODE Project

The Government of Kosovo has been supported from the World Bank to implement the Kosovo Digital Economy (KODE) Project. The KODE Project implemented by the Ministry of Economy will finance the critical fundamentals needed for digital transformation and Policy fulfillment. It will provide high speed broadband infrastructure and support access to labor markets, new sources of knowledge, and public services to households and institutions in Project areas. At the national level, the Project will train and connect youth to employment opportunities through YOU Program and improve access to knowledge sources, including to better reaching and collaborations opportunities to High Educational Institutions.

Youth Online and Upward (YOU) Program

YOU Program will finance provision of training for young people and their connection to working opportunities. The activities will primarily cater to unemployed or underemployed young men and women to increase their ability to compete in relevant segments of work. The Program will skill beneficiaries to perform IT and IT-enabled services. It is expected that through this training the beneficiaries will increase their employability in the local ICT market.
